

WHAT'S THE FASTEST WAY TO DETERMINE THIS TANK'S:
LOCATION?
INSPECTION SCHEDULE?
COMPLIANCE STATUS?
MANUFACTURER?
SHELL THICKNESS?
OWNER?
MATERIAL?

 **AbaData**
EQUIPMENT MANAGEMENT

TRACK YOUR INVENTORY, MANAGE YOUR DATA

Remember what life was like before AbaData – trying to pull multiple, disparate but essential pieces of information from varied, unrelated sources?

Life is better now. You log in and instantly access data related to pipelines, wells, dispositions, surface features and much more through a single, user-friendly window.

Now, we'd like you to envision something new.

If you work for an E&P company, your organization may have equipment spread across multiple fields in Alberta – or even Western Canada. Facilities with tanks, vessels or pressure safety valves that require regular inspection and maintenance. Equipment that may have

recently been sold or re-acquired.

Imagine logging in to AbaData and instantly seeing your facilities on the map screen. And on top of that, having the ability to access and maintain your own equipment database. Keep track of inspection and compliance issues. Instantly see which vessels and valves are in place at given facilities. Assign tasks where work is required. And, determine which users have the ability to add or alter information in the database.

Like AbaData, we think the new Equipment Management module can streamline your daily data processes and, again, make life easier. Contact us for more information or to organize a demonstration.

USER FACILITIES, TANKS, VESSELS, PRESSURE SAFETY VALVES, SOLD EQUIPMENT, TASKS
