

# Emergency Planning Zones

Residents and emergency planning zones displayed in AbaData.

## EPZs and AbaData

With this custom component, AbaData clients can enhance corporate emergency planning and response processes.

If your company has a database of residents and georeferenced EPZ boundaries, we can incorporate the information into AbaData – and give your users the ability to perform powerful geographic searches and instantly generate reports from the results.

Users can access resident or landowner data by searching for the first or last name, or by selecting one or more residents on the map screen.

Pre-built 1 kilometre, 4 kilometre and polygon-based search functions allow fast, precise geographical searching and reporting. Users can also add custom map icons including road blocks and wind markers.

Once the geographic selection is made, EPZ System users can generate various

reports, including surface facilities, sub-surface facilities, residents and mailing lists.

Resident icons can also be customized – for example, use different colours depending on whether evacuation assistance is required or whether the residence is within a given distance from a pipeline or gas plant.

## Map Icons and Features

- Residents
- Planning zone areas and boundaries
- Landowners
- Facilities including gas plants and compressor stations
- Shut-down valves
- Evacuation centres

## Reports

- Residents (basic or detailed)
- Landowners
- Facilities
- Sub-surface Facilities
- Evacuation centres
